📄 SUMMARY

Frontend Engineer with a solid foundation in HTML, CSS, JavaScript (ES6+), and React, currently expanding into TypeScript. Experienced in building responsive, interactive web applications — including a full e-commerce website in React featuring product listings, category filtering, and a shopping cart system powered by useReducer, Context API, and localStorage persistence. Comfortable consuming REST APIs, debugging real-world state management issues, and writing clean, reusable components. Actively growing toward full-stack readiness while documenting every project publicly on GitHub.

🎓 EDUCATION

Federal Polytechnic Mubi

01/2024 – 08/2026 | Adamawa State, Nigeria

National Diploma (ND) in Computer Science

Completed a National Diploma (ND) in Computer Science with Upper Credit, gaining a strong foundation in programming, software development, database management, computer networking, operating systems, and problem-solving. Worked on practical projects that strengthened analytical thinking and technical skills while developing an interest in modern web development.

🧠 TECHNICAL SKILLS

(HTML5 • CSS3 • JavaScript (ES6+) • TypeScript (Learning) • React • useReducer & Context API • React Hooks • Form Validation (Zod) • Tailwind CSS • Bootstrap • REST APIs • Fetch API • Git & GitHub • Responsive Web Design • Debugging & State Management)

🌐 LANGUAGES

English, Hausa

📁 PROJECTS

Project 1, E-Commerce Website (React) — 2026

07/2026 – 09/2026

- Built a full-featured e-commerce web application using React, including product listings, category filtering, and a shopping cart system.

- Implemented global state management with useReducer and Context API to handle cart operations across the app.
- Added localStorage persistence so cart data survives page reloads, using a lazy initializer to avoid race conditions.
- Built dynamic product filtering by category and quantity controls for cart items.
- Added a toast-style notification system for user feedback on cart actions.
- Debugged and resolved multiple real-world state bugs, including reducer typos, stale localStorage data, and conflicting useEffect hooks.

Project 2, Currency Converter (JavaScript)

2026

- Built a currency converter that fetches live exchange rates from a public API.
- Implemented asynchronous API requests with error handling for invalid inputs and failed requests.
- Documented real bugs found and fixed during development as part of a public write-up.

Project 3, Weather App (JavaScript)

07/2026 – 08/2026

- Built a responsive weather application using JavaScript and a Weather API.
- Implemented asynchronous API requests with the Fetch API.
- Displayed real-time weather information including temperature, humidity, wind speed, and conditions.
- Added error handling for invalid city searches to improve user experience.

Project4, Personal Portfolio — 08/2026 – Present

Designed and developed a responsive portfolio website to showcase projects, technical skills, and contact information.
